

II. SPECIFICATION AMENDMENTS

Please replace the paragraph beginning on page 1, line 22 through line 27 as rewritten below:

Patent FR 2 791 578 uses the same stacked rings device to form a cylindrical rotor modifying the connections between the cells and the ducts, that from axialradial in the US patent become axial, by inclining the cells with respect to the radii of the rings in order to improve the efficiency of the device that is based on dispersion of the mobile phase jet entering into the cell containing the stationary phase.
